

**IMPORTANTE:**

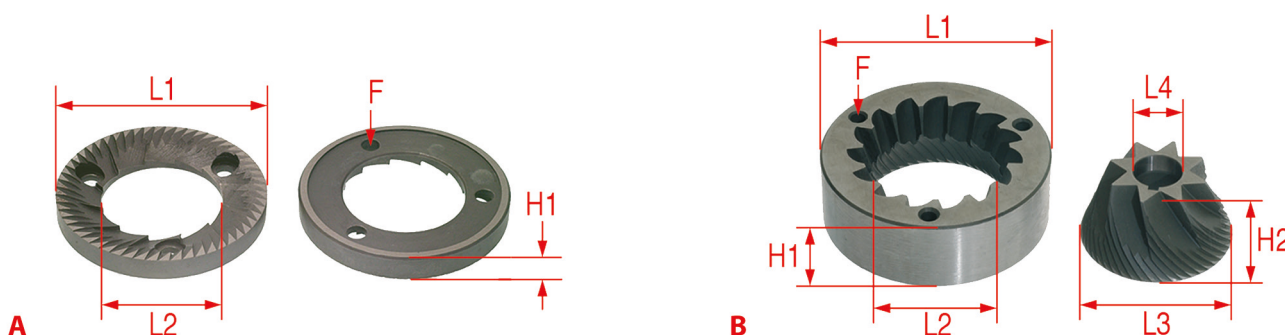

in caso si riscontrino comportamenti anomali delle macchine, ad esempio la durata di vita limitata, verificate:

- A) Le macchine devono essere montate nel macinacaffè indicato in tabella.
- B) Non ci devono essere impurità come sassetti o residui ferrosi tra i chicchi di caffè.

Se riscontrate che le macchine sono montate nel macinacaffè indicato in tabella e che non ci sono impurità, contattate i nostri commerciali per le pratiche di rientro e fateci avere i campioni delle macchine per un controllo tecnico accurato.

**ATTENZIONE:** Riutilizzate sempre le VITI originali. In caso contrario una piccola differenza di forma o di filetto può ripercuotersi sul corretto posizionamento e, di conseguenza, sul corretto funzionamento del macinacaffè.

Nei casi più estremi ci può essere addirittura un decentramento della macina stessa, causando la falsa impressione che i fori non siano perfettamente allineati.
