

Mister Dry ZERO VOC

**SUPER CONCENTRATED PROFESSIONAL DETERGENT
DERIVED FROM COCONUT OIL AND POTATO FLOUR**

Mister Dry Zero Voc is the first range of detergents 360° safeguarding the environment and man, using natural raw material and simultaneously respecting both human health and the impact on the environment with its natural raw materials (vegetable origin).

Mister Dry Zero Voc is natural and harmless to both people and things. It is able to provide extended well-being, both while cleaning and at a more rational level, when you realize that you have made the right choice both for yourself and for the environment.

A line of "good, beautiful, useful" products.

The Zero Voc project

- Non-aggressive pH
- Completely ammonia free
- Contains no solvents or other volatile substances
- Performance in line with standard products on the market
- An innovative line with low content in harmful volatile substances. Therefore the detergents are compatible with the environment and not harmful to the skin and respiratory mucous membranes.
- The safest products designed to reduce allergies to a minimum standard, tested by University Clinical Institutes.
- Eco-dermo compatible products contain the latest generation molecules. These reduce, to lowest levels, the outburst of allergic dermatological or respiratory allergies through contact or inhaling.
- These products do not contain any scents which reduces to minimum levels the risk of allergies.
- Dosers releasing larger drops compared to the last generation ones. The larger drop system has been designed to create less aerosol.
- By using a spray that filters incoming air, atmospheric bacteria is prevented from entering the container and polluting its content.
- The use of matt containers prevents bacteria from building, in particular algae.

Safety

Safety is a precious resource if supported by reliable and faultless tests. For this reason, we had Operational Units and Departments of a prestigious Italian University carry out clinical experiments.

- We chose the University of Bologna, which allowed us to unite under one single ethical committee and the following Operating Units:
 - DERMATOLOGY DEPARTMENT of the Polyclinic Hospital S.Orsola Malpighi, which carried out hypoallergenicity and safety tests under a dermatological profile.
 - OCCUPATIONAL MEDICINE DEPARTMENT Polyclinic Hospital S. Orsola Malpighi for the tests of respiratory provocation able to show that this product does not cause bronchial irritation (at the tested concentrations). All these department units centre around the Department of Internal Medicine, of Aging and Nephrological Diseases – University of Bologna.
- Mister Dry Zero Voc products have been declared clinically hypoallergenic under the dermatological and respiratory profile. With the aim of creating a product with the highest safety levels, we have tested it on people suffering from MCS (Multiple Chemical Sensitivity). When we took part in the conference by A.M.I.C.A., we were able to draw some results based on Italian patients and the scientific community, which studies these disorders. From the study carried out, the following outcome could be drawn:
 - According to the international association Global Initiative for Asthma, 300 million people in the world suffer from this disease, that equates to 1 in 20 people.
 - In Italy, it is estimated that approximately 9 million people every year get ill with respiratory diseases and 4 million seek medical help. It has been calculated that approximately 15-20 per cent of the Italian population suffer from 'generic' allergies, which is a growing phenomenon mainly amongst youngsters and women.
- Safe for children.

DOES NOT CONTAIN VOLATILE OR SENSITIVE SUBSTANCES

Directives on the VOC and the eco-system

The new ecological sensitivity and environment legislations are showing that some solutions of the past are no longer in line with customers' expectations and with the health laws which are in force and with the eco-system.

Example: VOC Volatile Organic Content

- limited by Directive 1999/13/CE.
- regulated in the specific field of varnishes by Directive 2004/42/CE
- placed at a disadvantage with taxes by Swiss legislation (RS 814.018 art.7)

1000 ml

Art. cod.
3092300

HAND DISH-WASHING DETERGENT

super-concentrated, hypoallergenic, clinically tested

1000 ml bottle

- Very effective, it quickly cleans and removes dirt and grease off dishes and pans
- It is gentle on hands (vegetable glycerin), the environment and your health
- It is eco-friendly and biodegradable
- **Zero VOC** (Volatile Organic Content): this product contains no volatile harmful or sensitizing substances, totally ammonia and solvent free

*SHAKE BEFORE USE

Further Benefits:

- Quick and effective action
- It removes dirt and grease off dishes and pans
- It is gentle on the skin of your hands (vegetable glycerin)
- Clean and shiny glasses and dishes
- Eco-friendly and biodegradable
- Natural formula, safeguarding the environment and your health thanks to the use of vegetable substances
- Almost no risk of dermatological and respiratory allergic reactions

Composition: Vegetable surfactants from renewable sources, vegetable origin glycerin, coconut betaine. It contains no colourings, preservatives or chemical additives.

Precautions: It is not dangerous for the environment or to your health as in compliance with Reg. CE 1907-2006 Reach, biodegradable. The eco-toxicological risk due to contact of this product with the water and soil environment is completely negligible. Avoid eye contact and keep away from children.
